

Claims

[c1] What is claimed is:

A system for low cost construction debris removal and to provide aesthetic debris storage comprising:

a small steel rectangular trash bin less than 9 feet long, less than 6 feet wide, and less than 6 feet high for receiving construction debris; and

a small vehicle having a debris sized bed and grasping means to recover debris from said bin using a single operator.

[c2] A system as in claim 1, wherein:

said vehicle includes a debris removal arm sized to reach over and into said bin.

[c3] A method of economically removing trash from a construction site comprising the steps of:

(1)providing a small steel trash bin less than 8 feet long, less than 4 feet wide and less than 6 feet high at a construction site; and

(2)using a small truck with a trash storing bed at said site periodically to haul away trash.
